HOW TO USE THIS CAPS GUIDE

BOTTLES, JARS, JERRICANS, CARBOYS & JUGS

1. Measure the bottle's neck diameter. Use the outer edge of the thread on the opposite sides of the neck to determine size.
2. Find the corresponding size to the right and turn to the page to find the appropriate thread.
3. The thread symbols are shown below and correspond to the threads and how they might look on your bottle. The most common are /400, /410, and /415. These thread sizes have varying degrees of overlap. Visit our website at www.usplastic.com/CapsGuide for more information.
4. Once you determine the size and thread, you only need to choose the style of cap you desire for your application. Following any specifications of material is essential when you are selecting the correct seals and liners.
